## Electricity Subsector Cybersecurity Capability Maturity Model (ES-C2M2) (Case Study)

James Stevens

Senior Member, Technical Staff - CERT® Division

James Stevens is a senior member of the technical staff in the CERT Program at Carnegie Mellon University's Software Engineering Institute. James has been working in the information security field for over eighteen years and holds a BS degree in Electrical Engineering from the University of Notre Dame and an MBA from Carnegie Mellon University's Tepper School of Business. James currently performs information and infrastructure security and resilience research and develops methods, tools, and techniques that support the secure and resilient delivery of critical services.

<b>Report Documentation Page</b>			Form Approved OMB No. 0704-0188	
<p>Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.</p>

### Protecting the Nation's Electric Grid from Cyber Threats

  
Howard A. Schmidt  
January 09, 2012  
03:56 PM EDT

Protecting the electric system from cyber threats and ensuring its resilience are vital to our national security and economic well-being. This is exactly why cybersecurity is one of four key themes in the White House's Policy Framework for a 21<sup>st</sup> Century Grid. For obvious reasons, the private sector shares our interest in a safe and secure electric grid. The Administration has benefited from working closely with industry, including to develop the Roadmap to Achieve Energy Delivery Systems Cybersecurity, released by the Department of Energy last September.

To continue that close cooperation, last week Deputy Secretary of Energy Dan Poneman and I, along with senior officials from Department of Homeland Security, hosted industry leaders to discuss a new initiative to further protect the electric grid from cyber risks. This initiative – the Electric Sector Cybersecurity Risk Maturity Model – is a new White

# ES-C2M2 Background

White House initiative

Led by Department of Energy

In partnership with Department of Homeland Security

In collaboration with representatives of electricity subsector asset owners and operators

# ES-C2M2 Challenge and Objectives

## Challenge:

Develop capabilities to manage dynamic threats and understand cybersecurity posture of the grid

## Objectives:

- Strengthen cybersecurity capabilities
- Enable consistent evaluation and benchmarking of cybersecurity capabilities
- Share knowledge and best practices
- Enable prioritized actions and cybersecurity investments

Software Engineering Institute

Carnegie Mellon University

# ES-C2M2 Approach and Results

## Approach:

- Create a maturity model and self-evaluation survey to develop and measure cybersecurity capabilities
- Encourage public–private collaboration effort
- Leverage existing guidance and knowledge

## Results:

- A scalable, sector-specific model created in partnership with industry

# ES-C2M2 Structure

# ES-C2M2 Maturity Indicator Levels Example

Specific Characteristics for the ASSET Domain	
<b>MIL0</b>	
<b>MIL1</b>	1. Asset inventory <ul style="list-style-type: none"><li>a. There is an inventory of OT (operational technology) and IT (information technology) assets that are important to the delivery of the function.</li></ul> <p>...</p>
<b>MIL2</b>	...
<b>MIL3</b>	1. Asset inventory <ul style="list-style-type: none"><li>a. The asset inventory is current and complete for assets of defined categories that are selected based on risk analysis.</li><li>b. Asset prioritization is informed by risk analysis.</li></ul> <p>...</p>

Progress from one MIL to the next involves more complete or more advanced implementations of the core activities in the domain.

The organization is also expected to perform additional activities at higher levels consistent with its risk strategy.

Software Engineering Institute

Carnegie Mellon University

# ES-C2M2 Maturity Indicator Levels

Level	Name	Description
MIL0	Not Performed	<ul style="list-style-type: none"><li>MIL1 has not been achieved in the domain.</li></ul>
MIL1	Initiated	<ul style="list-style-type: none"><li>Initial practices are performed, but may be ad hoc.</li></ul>
MIL2	Performed	<ul style="list-style-type: none"><li>Practices are documented.</li><li>Stakeholders are involved.</li><li>Adequate resources are provided for the practices.</li><li>Standards or guidelines are used to guide practice implementation.</li><li>Practices are more complete or advanced than at MIL1.</li></ul>
MIL3	Managed	<ul style="list-style-type: none"><li>Domain activities are guided by policy (or other directives).</li><li>Activities are periodically reviewed for conformance to policy.</li><li>Responsibility and authority for practices are clearly assigned to personnel with adequate skills and knowledge.</li><li>Practices are more complete or advanced than at MIL2.</li></ul>

Software Engineering Institute

Carnegie Mellon University

# A Dual-Progression Model

ES-C2M2 is a dual-progression model.

Two things progress across the maturity indicator levels:

1. **Institutionalization** – the extent to which the practices are ingrained in the organization's operations
2. **Approach** – the activity's completeness, thoroughness, or level of development/ sophistication

# Example Specific Objective: ASSET — approach progression

Electricity Subsector Cybersecurity Capability Maturity Model **Version 1.0**

**ASSET DOMAIN**

## 3. Manage Changes to Assets

- |             |  |
|-------------|--|
| <b>MIL1</b> | a. Changes to inventoried assets are evaluated before being implemented<br>b. Changes to inventoried assets are logged   |
| <b>MIL2</b> | c. Changes to assets are tested prior to being deployed, whenever possible<br>d. Change management practices address the full lifecycle of assets (i.e., acquisition, deployment, operation, retirement)                                   |
| <b>MIL3</b> | e. Changes to assets are tested for cybersecurity impact prior to being deployed<br>f. Change logs include information about modifications that impact the cybersecurity requirements of assets (availability, integrity, confidentiality) |

*Notice that the practices progress from one MIL to the next within the objective (practices at higher MILs are more complete in their implementation, more sophisticated in their approach, or more thorough).*

# Example Common Objective: ASSET — institutionalization progression

## 4. Manage ASSET Activities

MIL1	<i>No practice at MIL1</i>
MIL2	<ul style="list-style-type: none"><li>a. Documented practices are followed for asset inventory, configuration, and change management activities</li><li>b. Stakeholders for asset inventory, configuration, and change management activities are identified and involved</li><li>c. Adequate resources (people, funding, and tools) are provided to support asset inventory, configuration, and change management activities</li><li>d. Standards and/or guidelines have been identified to inform asset inventory, configuration, and change management activities</li></ul>
MIL3	<ul style="list-style-type: none"><li>e. Asset inventory, configuration, and change management activities are guided by documented policies or other organizational directives</li><li>f. Policies include compliance requirements for specified standards and/or guidelines</li><li>g. Asset inventory, configuration, and change management activities are periodically reviewed to ensure conformance with policy</li><li>h. Responsibility and authority for the performance of asset inventory, configuration, and change management activities is assigned to personnel</li><li>i. Personnel performing asset inventory, configuration, and change management activities have the skills and knowledge needed to perform their assigned responsibilities</li></ul>

# Using ES-C2M2

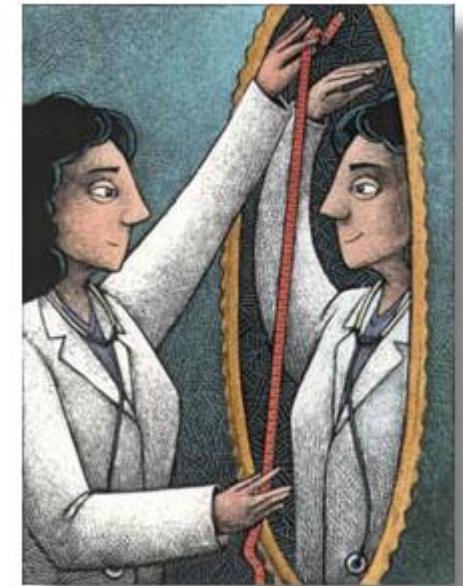

# ES-C2M2 Self-Evaluation

The ES-C2M2 model is supported by a survey-based self-evaluation.

An organization can use the survey (and associated scoring tool) to evaluate its implementation of the model practices.

To complete the survey, an organization selects its level of implementation for the model practice from a 4-point answer scale.

# 4-Point Answer Scale

4-point answer scale	The organization's performance of the practice described in the model is ...
Fully implemented	Complete
Largely implemented	Complete, but with a recognized opportunity for improvement
Partially implemented	Incomplete; there are multiple opportunities for improvement
Not implemented	Absent; the practice is not performed in the organization
